Building Irresistible TRA-Digital Learning

Spend the day learning, inventing, building and collaborating with your colleagues as we get inspired to build learning both traditionally and digitally (TRA-Digital) that prepares kids to be excited, self-directed learners.

During this hands on learning event we’ll leverage your iPad technology, tape, plastic & cardboard in an unforgettable, TRA-Digital approach to education. Strap yourself in and get ready for big, new ideas!
Kevin Honeycutt grew up in poverty and attended school in many places, including Kansas. As he witnessed education around the country he collected powerful experiences that still influence his conversations and his work with educators. He spent 13 years teaching art K-12 Kansas public schools, served as a school board member and for 17 years spent summers leading creative adventure camps for kids of all ages.

In 1991 he received the Making IT Happen Award which is an internationally recognized awards program for educators and leaders in the field of educational technology integration, commitment and innovation in K–12 schools. The program identifies and rewards educational technology.

During ipad iCamp Day we will explore the idea of teachers as explorers and the idea of taming iPad tools so we can use them in education along with using traditional materials to build and construct.

A presenter with worldwide reach, Kevin presents to over 100,000 educators, students and business people every year. He has been an Apple Distinguished Educator since 2011 and has over 65,000 followers on Twitter and 2 million+ views on his youtube channel.

Kevin will be leveraging iPad technology as well as traditional learning in this hands-on all day collaborative workshop. You will leave with new skill and new ideas to implement into your classroom. Come prepared to have an amazing day of learning and collaboration.
